ABOUT ME

Software Engineer with a solid background in Computer Engineering and proficiency in Linux environments. Specializing in the architecture and development of scalable Web and Mobile applications. I have hands-on experience in systems development and the creation of modular components. I excel in my analytical ability to solve complex problems under pressure, focusing on delivering scalable, maintainable code and results-oriented solutions.

PROFESSIONAL EXPERIENCE

Teteocan Technologies • *Software Developer Intern* Apr 2025 – Sept 2025
Architected cross-platform mobile solutions using **Flutter** and **Dart**, building modular components that accelerated the development cycle. Designed the **Firebase** infrastructure with real-time synchronization, structuring security rules and optimizing the database schema to significantly reduce latency in critical queries, ensuring app scalability.

FEATURED PROJECTS

Añi Ita (Soul of the Flower) 🌸 *Python, Web, NASA Data*
Environmental restoration engine using **Landsat/MODIS** satellite data to automate the design of "Pollinator Islands". Features predictive flora models and an immersive 3D "Bee Mode" for visual validation.

Huellazo (Solana LATAM Hackathon) 🌋 *React, Solana, Rust, NFTs*
Sustainable tourism platform gamifying ecological impact via blockchain. Developed integration using custom RPCs, earning a ****direct pass to the incubation phase****.

Haskell ML Cat 🐈 *Haskell, Python, Hasktorch, IPC*
High-performance benchmarking system. Hybrid architecture connecting a functional Haskell backend with a Python interface via **IPC**, comparing KNN models against Deep Learning.

ACHIEVEMENTS AND AWARDS

3rd Place – CLIHC (Latin American Conf. on Human-Computer Interaction) 2026
International recognition for innovation in user-centered interface design and development with social impact.

Top 20 Finalist – HackODS UNAM 2026
Development of technological solutions and data visualization using open data portals (INEGI, UNAM) for the SDGs.

Global Top 5 – Bolt x MiniMax VIBE HACKERS 2025
Solo development of "Polli Vision", an AI vision tool for real-time species identification in under 48h.

Local Winner (4th Place) – NASA Space Apps Challenge 2024
Development of "Cozobi", an agricultural optimization solution based on geospatial telemetry.

SKILLS

Languages: Python, JavaScript/TypeScript, Dart, SQL, C, Bash.
Infrastructure & Systems: Linux, Docker, Git, CI/CD.
Web & Mobile: React, Next.js, Vite, Tailwind CSS, Flutter.
Interests: DevOps, Machine Learning, Web3, Systems Development.

EDUCATION AND CERTIFICATIONS

B.S. in Computer Engineering (Expected 2026)	<i>Universidad Tecnológica de la Mixteca</i>
Machine Learning Engineer & Associate Python Developer	<i>DataCamp</i>
Professional DevOps Path	<i>CódigoFacilito</i>
Back-end Specialization	<i>Oracle Next Education (ONE) G7</i>
OCI Foundations Associate 2025	<i>Oracle</i>
